

Talonz Golf Ball Retriever is the invention of a US Navy Viet Nam Vet who was tired of buying the other products that work well, but they are prone to be big catchers of leaves and debris, they have moving parts that get hung up, or fall off, and the aluminum poles are very fragile!

Talonz is tough, made of injection molded Nylon, it will last for years to come! The 16' collapsible pole is made of fiberglass, the section compression locks are stainless steel, don't be a gentle wuss, work it, it's a golf ball dredge!

You will notice that the tip section of the pole seems loose, give it a firm yank, it will lock in, making a flexible scoop for picking up balls. Drag it over the balls, pulling towards you, then lift and rotate the Talonz 180° as you are pulling towards you, this keeps the balls in their channels! With a little practice you will catch on to the technique!

The photo below is about 150 balls retrieved from very leafy, scummy water, where no orange basket retriever would be able to go!
